Requirements for the authors.

The manuscript authors must provide reliable results of the work done, as well as an objective judgment on the significance of the study. The data underlying the work should be presented accurately, without errors. The work should contain enough details and bibliographic references for possible reproduction. False or knowingly erroneous statements are perceived as unethical behavior and unacceptable.

Authors should make sure that the original work is submitted and, if other authors' works or claims are used, provide appropriate bibliographic references or citations. Plagiarism can exist in many forms - from representing someone else's work as copyright to copying or paraphrasing significant parts of another's work without attribution, as well as claiming one's rights to the results of another's research. Plagiarism in all forms constitutes unethical acts and is unacceptable. Responsibility for plagiarism is entirely on the shoulders of the authors.

Significant errors in published works. If the author detects significant errors or inaccuracies in the publication, the author must inform the editor of the journal or the publisher about this and interact with them in order to remove the publication as soon as possible or correct errors. If the editor or publisher has received information from a third party that the publication contains significant errors, the author must withdraw the work or correct the errors as soon as possible.

CHALLENGES IN PEDAGOGICAL STRATEGIES FOR INSTRUCTING BUSINESS VOCABULARY TO TERTIARY-LEVEL LEARNERS

Hafizov Abror Alisher ugli,
ESP teacher at IIAUz
abrorbek.hafizov92@gmail.com

Abstract: Teaching business vocabulary to tertiary students presents numerous challenges, including the complexity of the language, lack of contextual understanding, diverse student backgrounds, motivational issues, pedagogical limitations, and assessment difficulties. This study explores these issues through a literature review and a survey of tertiary business educators. The findings highlight the importance of practical application and interactive teaching methods to enhance learning outcomes. Recommendations include integrating real-world business scenarios, promoting internships, and employing varied assessment strategies.

Introduction.

Business vocabulary is essential for students pursuing careers in the business world, providing the foundation for effective communication, understanding complex concepts, and participating in global markets. However, teaching this vocabulary at the tertiary level presents several challenges. These challenges range from the inherent complexity of the language and students' lack of real-world experience to the diversity of student backgrounds and motivational issues. Additionally, traditional pedagogical approaches and assessment methods may not be sufficient to address these challenges effectively.

This article investigates the primary problems educators face when teaching business vocabulary to tertiary students and explores strategies to improve the effectiveness of instruction. By understanding these complexities and proposing practical solutions, this study aims to enhance student learning and engagement, better preparing them for their professional futures in the business world.

Literature Review

Complexity of Business Vocabulary

Business vocabulary is characterized by its specialized terms, jargon, idiomatic expressions, and technical language specific to various disciplines within business, such as finance, marketing, and management. This complexity can be overwhelming for students, especially for those who are non-native English speakers. The specialized nature of business vocabulary requires students to not only understand the definitions but also the contexts in which these terms are used (Coxhead, 2000; Nation, 2001).

Lack of Contextual Understanding

Many tertiary students lack practical business experience, making it difficult for them to grasp the nuanced meanings of business vocabulary. Theoretical knowledge alone is insufficient; students need to understand how and when to use these terms appropriately in real-world scenarios (Belcher, 2006). Without this contextual understanding, students may struggle to apply their vocabulary knowledge effectively.

Diverse Student Backgrounds

The diversity of student backgrounds in tertiary institutions adds another layer of complexity to teaching business vocabulary. Students come from various educational and cultural backgrounds, resulting in differing levels of familiarity with business concepts and terminology. This diversity requires educators to adopt flexible and inclusive teaching methods to address the varied needs and proficiency levels of their students (Johns, 1997).

Motivational Issues

Motivation is a critical factor in language learning. Business vocabulary can seem dry and irrelevant to students, particularly if they do not immediately see its connection to their future careers. This lack of motivation can hinder their engagement and retention of vocabulary (Tomlinson, 2011).

Pedagogical Limitations

Traditional teaching methods, such as rote memorization and lecture-based instruction, often fail to engage students or promote deep learning. These methods do not cater to the need for active engagement and practical application of vocabulary, which are essential for mastering business terminology (Belcher, 2006).

Assessment Challenges

Assessing students' mastery of business vocabulary can be challenging. Standardized tests may not accurately reflect a student's ability to use business vocabulary effectively in real-world contexts. More practical and varied assessment methods are needed to evaluate students' true proficiency (Nation, 2001).

Methods

A mixed-methods approach was used to investigate the challenges of teaching business vocabulary to tertiary students. This included a comprehensive literature review and a survey of tertiary business educators.

The literature review identified common issues and effective strategies in teaching business vocabulary. Sources included academic journals, books, and educational reports.

Survey Design

A survey was administered to 50 tertiary business educators to gather insights into their experiences and methods. The survey included quantitative questions about the frequency and effectiveness of various teaching methods and qualitative questions about specific challenges and successful strategies.

Results and Discussion

Complexity of Business Vocabulary

Survey respondents highlighted the difficulty students face with specialized terms. Many educators suggested using case studies and real-world examples to contextualize vocabulary, making it more accessible and relatable for students.

Lack of Contextual Understanding

Respondents noted that students without business experience struggle more with vocabulary. Practical projects and internships were recommended to provide the necessary context and real-world application of business terms.

Diverse Student Backgrounds

Educators reported that diverse student backgrounds require differentiated instruction. Tailoring materials to varying levels of proficiency and prior knowledge was deemed essential to meet the diverse needs of students.

Motivational Issues

Motivation was identified as a significant barrier. Linking vocabulary to career goals and incorporating current business events into lessons were effective strategies to increase student engagement and motivation.

Pedagogical Limitations

Interactive methods such as problem-based learning, simulations, and role-playing were found to be more effective than traditional lectures. These methods encourage active participation and help students apply vocabulary in realistic business scenarios, enhancing their understanding and retention.

Assessment Challenges

A variety of assessment methods, including formative assessments, project-based

evaluations, and oral presentations, were recommended to provide a more comprehensive evaluation of students' proficiency. These methods allow educators to assess practical usage of business vocabulary in context.

Conclusion

Teaching business vocabulary to tertiary students presents several challenges, including complexity, lack of contextual understanding, diverse student backgrounds, motivational issues, and assessment difficulties. By integrating practical scenarios, promoting internships, using interactive teaching methods, and employing varied assessment strategies, educators can enhance the learning experience and better prepare students for the business world. Addressing these challenges with innovative approaches will help students develop the necessary vocabulary skills to succeed in their careers.
